

Wedding Glue Auto

So Sticky Your Fingers will be Glued Together!

- **Perfect for concentrates.** An insane amount of resin makes it ideal for those seeking after the highest yields in plant extractions.
- **Super yielding auto.** This strain can produce up to 550gr/m2 in 70 days!
- **Amongst the strongest of 2021!** A ridiculously potent autoflower with 26% THC.
- **Ideal terps for a sweet tooth.** A delicious sweet vanilla taste that leaves your mouth-watering.
- **Perfectly balanced.** A well-balanced effect suited for both day and nighttime use.

A solid autoflower suited for all types of growers due to being super easy to grow; A Indica-dominant hybrid that takes 63-70 days from seed to harvest, it's a tall autoflower that can grow up to 120cm and produce around 550gr/m2. Thanks to the 26% THC, this strain offers a strong effect without much maintenance and buds so resinous that it looks like it's covered with creamy white icing. Expect a delicious terp mix of sweet vanilla and earthy aromas that comes along with a fairly strong head buzz that slowly transitions into a more relaxing corporal effect.

Bud description

The buds develop very dense and compact but, due to the thick trichome coating that gives them a milk-white color, it can be hard to see them in detail at first glance. With further inspection you'll notice the beautiful light-green nugs with dark-green hues that complement the nugs perfectly, and a few thin dark-orange hairs on top of the swollen medium-sized calyxes, which can sometimes display purple hues on the tips and reek of a unique aroma that smells like vanilla icing from afar but will gradually reveal all its aromas as you break the buds open.

Smoke report

Despite the Indica dominancy, Wedding Glue Auto offers a balanced effect; The potent effect starts off as a motivating and uplifting head buzz that gets you in a focused mindset and boosts creativity. As time passes the more Sativa-like effect transitions into a deep corporal relaxation that can alleviate muscle pain and promotes a calm state of mind.

Plant appearance

This super-producer can yield up to 550gr/m2 in 9-10 weeks and grows on the taller side, develops a main cola that reaches 120cm while being surrounded by sturdy long side branches that grow close together and give it a compact appearance despite its height. Due to the well-balanced mix, this variety develops a bushy foliage that can show a purple tint from early on and multiple flowering sites where the super frosty and dense ping pong-sized buds develop. It's the perfect choice for extractors seeking first-class strains that offer unconventional yet captivating terpene profiles strains while delivering both in resin quality and quantity.

Grow tips

We recommend applying LST techniques to allow light to reach deeper, resulting in higher yields and air to flow in between the buds, because despite being quite resistant it's still a plant and you don't want mold getting into your buds. This variety is ideal for beginner growers because it doesn't require a lot of maintenance or anything extra but remember to feed her properly and with good-quality nutrients, this way you guarantee the buds fatten up as they should and your plant doesn't suffer any kind of nutrient deficiencies. It's recommended to flush during the last weeks of flowering to enhance the aroma and encourage the appearance of unique colors.

Flavor

You can expect an overall sweet terpene mix with fruity hints and a strong vanilla icing taste that coats your whole mouth. This unique terp blend offers a more prominent earthy background that smoothes out the smoke on the inhale, and as you exhale, slowly expresses more peppery and sour hints with the earthy sweet vanilla still being the most noticeable flavor.
